

USPTO Issues JMEA Corporation a Fourth Patent for Disc Annulus Repair

ROCKVILLE, MD, December 16, 2011 (JMEA Corporation) -- On December 6, 2011, JMEA Corporation was granted a fourth patent by the United States Patent and Trademark Office (USPTO) for its proprietary technology to minimally invasively repair the disc annulus and to repair other tissue. This patent application was originally filed on March 27, 2009 and is part of a continuation set of patent applications related to this technology. In addition to this issued patent, JMEA continues to pursue a wide ranging portfolio of patent applications in areas ranging from spine to bone fusion technology to joint replacement.

To view this patent, please go to <http://www.pat2pdf.org> and search on 8070818, the patent number.

“We laid the foundation with our initial set of patents that were issued for this technology. This patent further extends our IP protection in this technology space as we continue to build on the foundation of the patents issued earlier,” said Jack Yeh, President and CEO of JMEA.

About JMEA

JMEA is an emerging medical device company focused on the development and commercialization of orthopedic implants. JMEA is developing proprietary technologies along with an innovative business model. Currently, JMEA has patents issued in spinal and sports medicine technology, as well as patent applications filed and pending in the spine, sports medicine, joint replacement and bone fixation technology areas. JMEA sells and markets the Edison[®] ACL Screw Set for ACL/PCL reconstruction.
